External Airflow orchestrates Fabric

Customer-managed scheduling; Fabric performs ingestion and transformations.

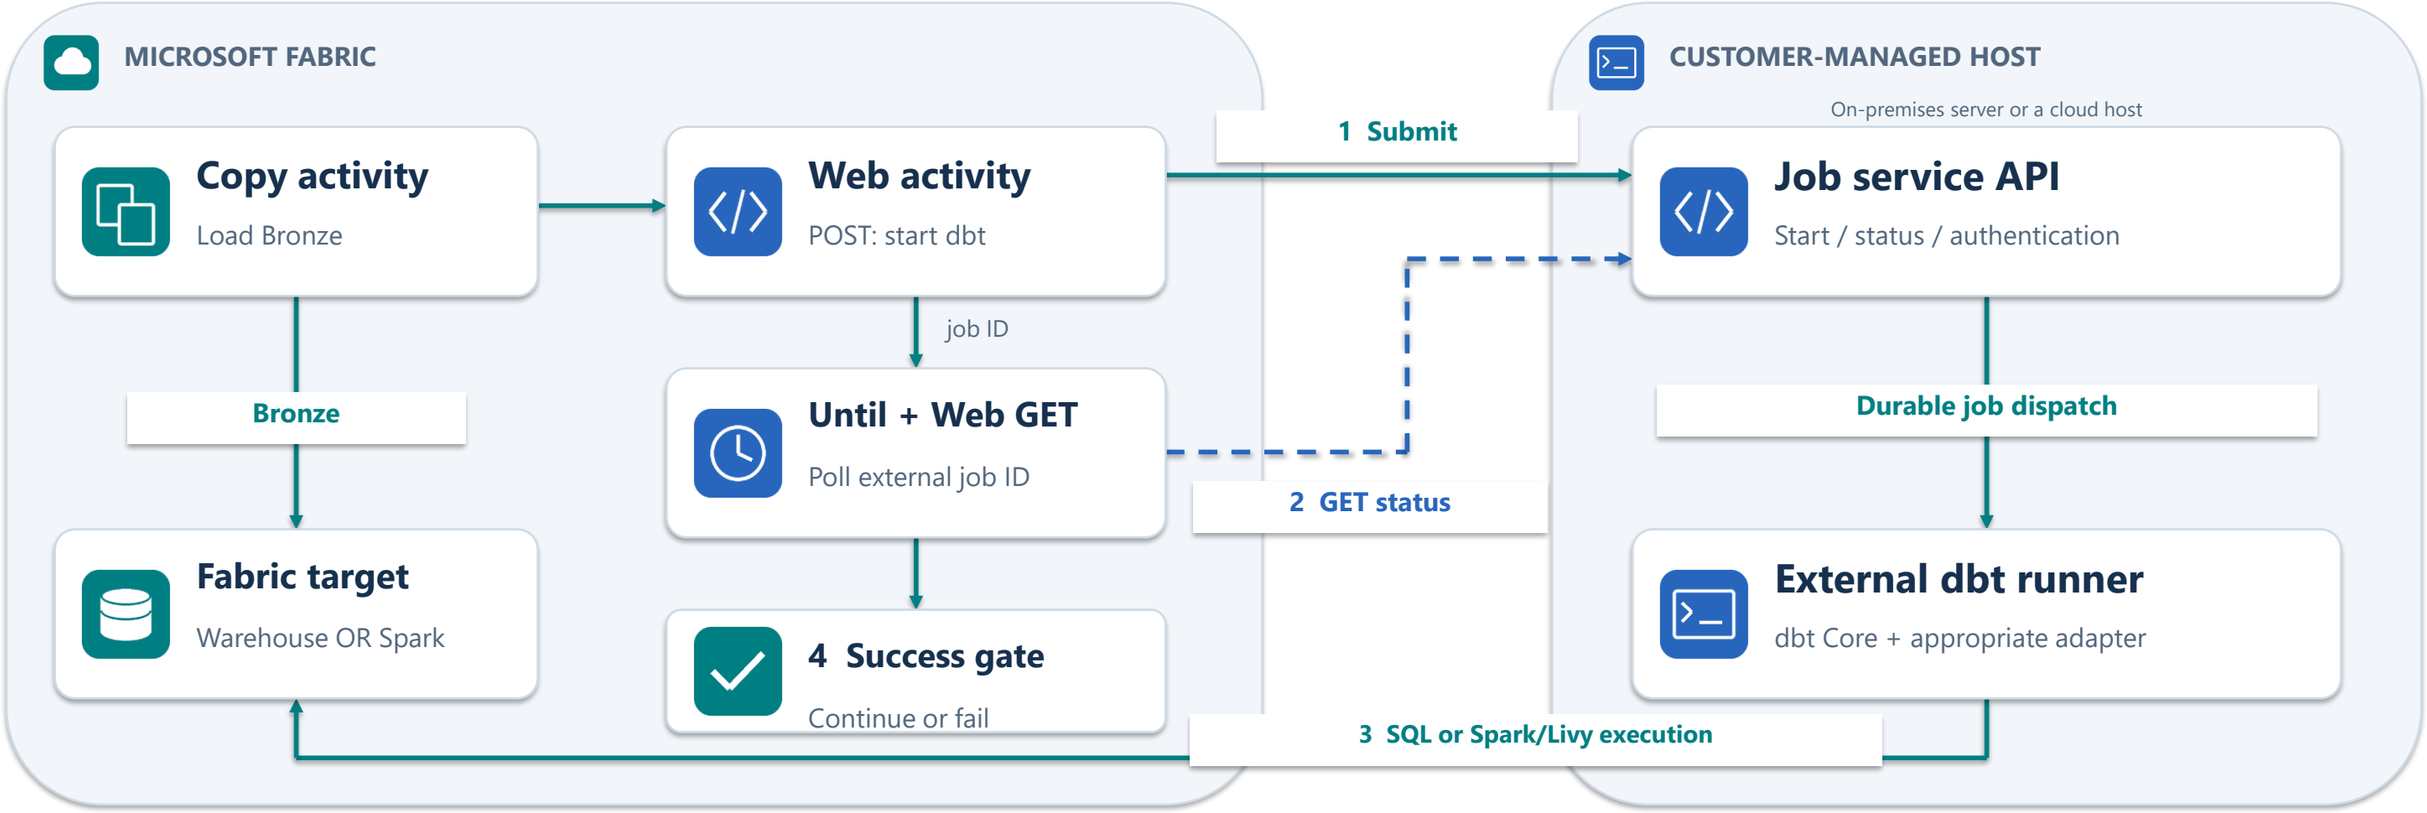

Airflow is the workflow owner; Fabric supplies the processing.

Warehouse: dbt-fabric over SQL | Lakehouse: dbt-fabricspark over Spark/Livy | Configure Entra identity + network access.

Start a Fabric job Monitor its status Warehouse adapter Lakehouse adapter

Fabric pipelines orchestrate external dbt

Fabric owns the schedule; an authenticated job service launches the external runtime.

A successful API submission is not a successful transformation.

dbt Core needs a real job service / hosting API. Use an approved network path or gateway where required; never expose a laptop shell.
